Experiment 11: Online Supermarket Using Cloud Computing

Aim

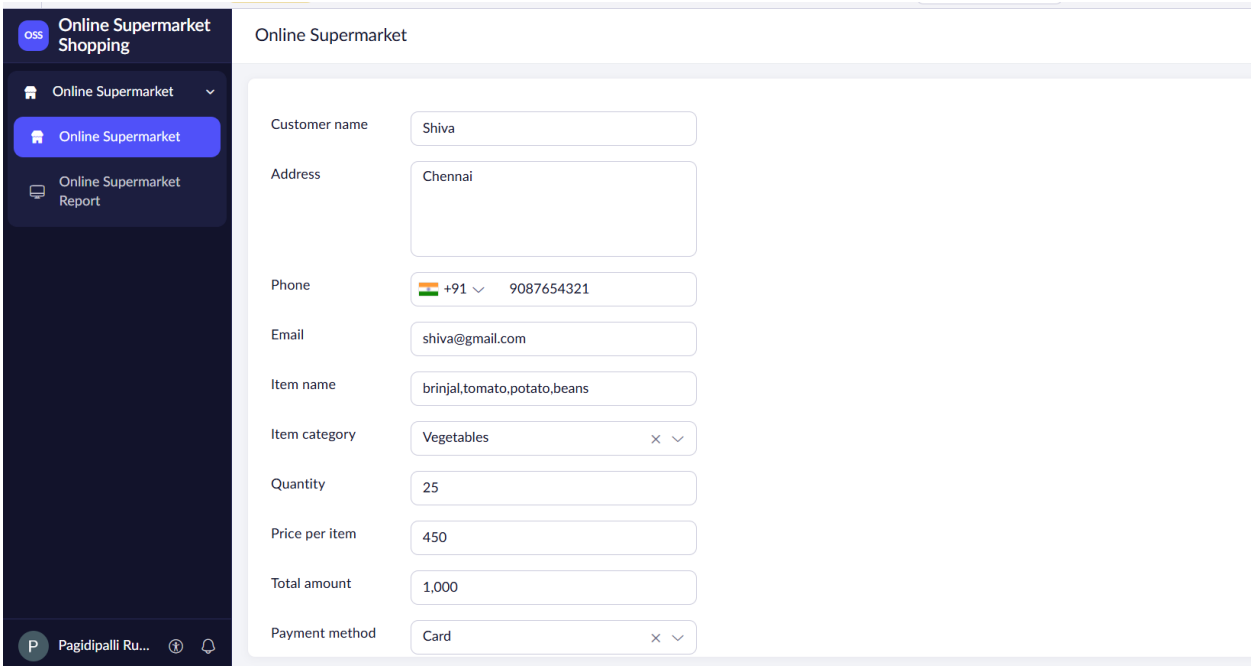

To create a simple cloud-based software application using Zoho Creator for an online supermarket to manage customer information, product details, quantities, and item classifications, demonstrating SaaS.

Algorithm

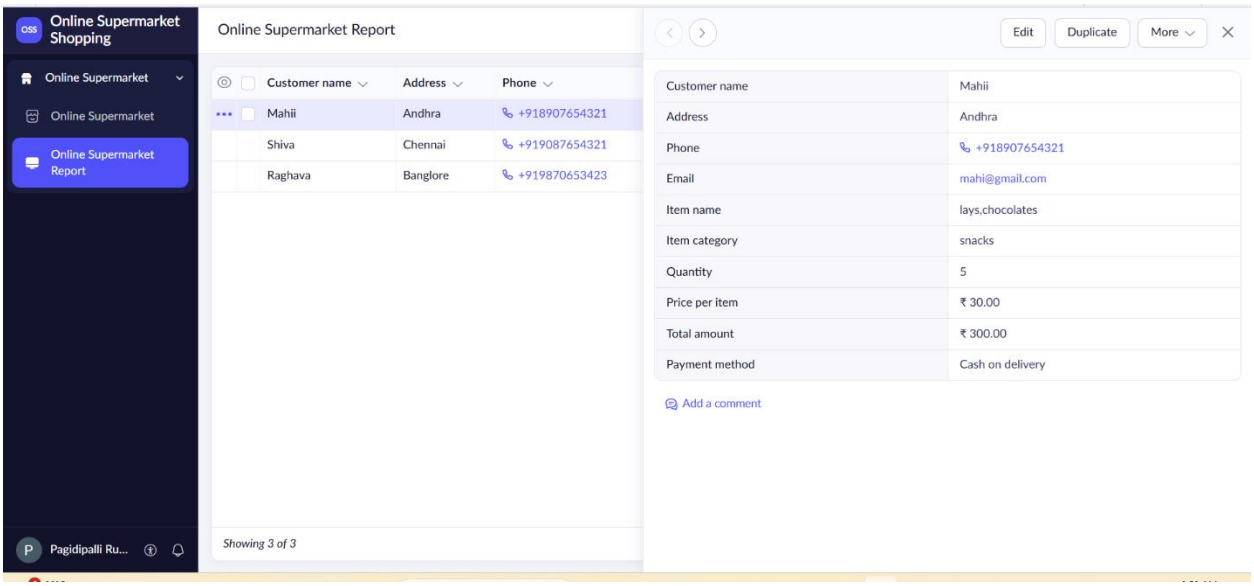

1. Open Zoho Creator and sign in.
2. Create a new application named Online Supermarket.
3. Create a form named Customer Information.
4. Add fields for customer name, address, phone, and email.
5. Create a form named Item Details.
6. Add fields for item name, quantity, price, and item classification.
7. Add suitable categories such as groceries, fruits, vegetables, and beverages.
8. Save the application and enter customer and item details.
9. View the stored records and verify the application.

Implementation

Input

Output

Result

Thus, a cloud-based Online Supermarket application was created successfully using Zoho Creator to manage customer details, products, quantities, and item classifications, demonstrating SaaS.
